

ABSTRACT

A process control system, including:

a first place where a customer places an order to produce an product from a material, by explaining order information which relates to a production process of the product;

a first conveyance device to convey the material from the first place to the second place;

a second conveyance device to convey order information from the first place to the second place;

a second place where the product is produced from the material, based on order information;

wherein the material and order information are separately utilized to produce the product at the second place.
